THE PAW PAW

Our largest native edible fruit tree in North America, Paw Paw is easy to grow (in full sun to shade), adaptable to most soil types and has no significant disease or pest problems

Great tree for edible landscaping or naturalizing in low areas or edge of woods and has been used successfully as a street tree in some Columbus neighborhoods

Interesting purple flowers in Spring give way to edible greenish yellow fruits in late Summer with a flavor similar to banana/pear/mango

Host to Zebra Swallowtail butterfly
